Experience

Google Developers Group on Campus TUP Manila August 2025 - Present
Frontend Development Lead

- Unified and transitioned the official website’s prototype to code by translating the Figma designs to code by implementing a responsive component-based architecture, ensuring UI consistency and cross-screen compatibility.
- Architected and developed the core team page, project page, and navigation system ensuring seamless navigation and responsive design using **React JS, Bootstrap, and Vanilla CSS**.

Google Developers Group on Campus PLM: InnOlympics 2026 April 2026
Backend Developer

- Assigned as the **Backend Developer** at 24-hour hackathon in EXXA Tower, Quezon City, Metro Manila, competing against 30 teams.
- Collaborated with a team of 4 to develop **Matooto**, an MVP mobile app addressing language barriers and teacher workloads, aligned with **SDGs 4, 8, and 10**.

TUP-Manila UI/UX Hawk-A-Thon March 2025
Project Manager, Figma Designer

- Assigned as the **Project Manager** at 24-hour UI/UX Design Hackathon in Technological University of the Philippines – Manila, competing against 18 teams.
- Collaborated with 4 members to design using **Figma** and present **AgriConnect**, a mobile e-commerce platform aimed at empowering local farmers by streamlining direct to consumer sales in response to **SDGs 1 and 9**.

Projects

Official GDGoC – TUP Manila | [Website](#) | [Source Code](#) React | JavaScript | Python | Flask

- The official digital hub for the Google Developer Groups on Campus at TUP – Manila, designed for centralized organization resources, showcase organization projects, and facilitate community engagement for student members.
- Developed the core team page, project page, and navigation system and helped developing the AI chatbot powered by **Gemini API**. Deployed the website in **Vercel** (front-end) and **Render** (back-end).

Retrn – Lost and Found System | [Website](#) | [Source Code](#) React | JavaScript | PostgreSQL | Supabase

- A centralized web-based lost and found management system for the TUP Manila community, designed to streamline the reporting, tracking, and recovery of lost items in real time.
- Developed and engineered the core system architecture, including the implementation of a secure user authentication. Designed the UI/UX of the system using **Figma** and deployed the web-app using **Vercel**.

CompassVote | [Website](#) | [Source Code](#) React | JavaScript | PostgreSQL | Supabase

- A centralized web-based online voting system for the student organization COMPASS at TUP Manila, aimed to replace use of Google Forms and manual voting.
- Led the end-to-end development of the website, architecting the frontend and managing the database. Deployed the website in **Vercel**.

YogaMatch | [Source Code](#) MediaPipe | Python

- A desktop application with computer vision that provide real-time yoga posture correction for 11 yoga poses, designed to assist users maintaining proper form and prevent injury during home workouts.
- Developed the desktop app interface using the python library **PyQt6**, integrating **OpenCV** for video processing and **MediaPipe** for landmark detection.

Matooto | [Source Code](#)

React Native | TypeScript | Node JS | Express | Firebase | Gemini API

- A mobile application designed to bridge language barriers in education through mother tongue based learning while automating the teachers’ workload in reading assessments.
- Designed and developed the database and backend using **Firebase** and **Node JS + Express** and connected the frontend to the backend.

DeptFlow | [Website](#) | [Source Code](#)

React | TypeScript | Node JS | Express | Supabase | PostgreSQL

- A web-based faculty management system with AI assisted scheduling using **Gemini API** specifically for the Computer Studies Department of TUP Manila.
- Assigned as the full-stack developer engineering the database using **PostgreSQL and Supabase**, developing the backend routes using **Node JS + Express**, and designing the frontend UI using **React and TypeScript**.
